

Layout Complications? ^{spatially}
 Inability to cluster nodes by compartment
 Important

Don't do this.
 Just let the user choose to ignore compartment-specific
 metabolite nodes... even that representation simplifies
 but also loses information about how it really works.

the network
 loses information
 about how it
 really works.

Maybe parent node for compartments?

How does Cytoscape handle parent nodes?

Could you represent diff levels of parent nodes
 as sets?
